A preview of new products

New SB126 Now Shipping

The SB126 is a Starting buzzer/tone generator. It was designed to generate a tone to start sporting events or anywhere a 600 Hz tone is needed. When the switch is depressed the LED will light and a tone will be sent out to both the 1/4" and XLR jacks for the duration of time the button is pressed. Can be powered with a 9V battery or a phantom power mic.

PROTOTYPE HRD342

The HRD342 is a digital room/speaker delay. Designed with simplicity, and ease of use in mind the HRD342 will compensate for speaker placement in large or small rooms. We have had room/speaker delays in the past (RD320 and RD1024) the new design has a much higher level of sound quality than previous versions. The list price will be \$167 making the HRD342 a very cost effective way to get a high quality, all metal chassis construction with XLR and RCA inputs and outputs. The front panel adjustable rotary knob will adjust from 12 Meters to 124 Meters of speaker distance. A front panel volume knob will aid in compensating gain to be just what you need.

PROTOTYPE HR74 MP3 card reader

The HR74 is a SD card or thumb drive MP3 reader. The HR74 was designed to be a no frills easy to operate MP3 player, in fact it can be used right out of the box with out the manual. It has RCA and 3.5mm stereo outputs. The HR74 is an elegant design without all the unusable overly complicated, quirky features of other MP3 players. The HR74 will be available to ship in December. Price TBA.
